QUALITY BY PICARD: EXPERIENCE AND PERFECTION MADE IN GERMANY

Craftsmen who use their tools day in, day out know what it's all about: uncompromising quality thanks to high-quality materials and precise workmanship for absolute robustness and safe, fatigue-free working. PICARD hammers stand for precisely that. The numerous different applications of our products demand specific designs and shapes and precisely matched material properties. We achieve this through innovative manufacturing and testing methods, coupled with production steps that even today still have a handmade feel to them. At least as important, however, is the comprehensive and long-standing know-how of our employees, who know exactly how our customers tick and what demands they place on their tools. It's therefore not without reason that the majority of our customers live by the maxim "Once a PICARD, always a PICARD!"

MASTER RANGE: FINEST FOR GRAFTERS

790
Carpenters' Roofing Hammer

reddot award 2016
winner

790½
Carpenters' Roofing Hammer
Light

791
Claw Hammer
13, 16, 20 or 24 oz.

797
Tilers' Hatchet
Also useful for camping and hobby.

761, 761½
Geologists' Hammer
With point or blade.

207
Tilers' Hammer
Various weights and sizes, for left or right handers. Also available with chrome or gold plated finish

590
Carpenters' Roofing Hammer

590½
Carpenters' Roofing Hammer
Light

591
Claw Hammer
16, 20 or 24 oz.

561, 561½
Geologists' Hammer
With point or blade.

01_Head

Forged using alloyed, hardened, special steel and given a smooth finish. The nail holder on the carpenters' roofing hammer has an extremely strong magnet

02_Claw and point

The claw and the slim, extended point on the carpenters' roofing hammer are precisely wrought and inductively hardened. Even small nails are securely caught..

03_Face

The face is carefully hardened and specially tempered; the roughened version has particularly deep checks. Also available with a plain face

04_Shaft

The construction of the forged, weight-optimised shaft provides perfect balance and supreme impact. Its carefully cut surface blends smoothly into the grip.

05_Handle

The leather grip on the solid steel handle is resistant to twisting. It not only looks good, leather absorbs moisture and releases it again once the work is done. The surface is extremely wear-resistant.

The two-component plastic handle (no image available) is ergonomically optimised and designed to be vibration-damping. It makes work effortless and is extremely durable thanks to the solid join between the shaft and handle, and the robust base plate.

PICARD MASTER RANGE

PICARD steel hammers are true masterpieces among tools. Supreme-quality materials result in a product that can cope with the very highest demands. As solid steel hammers, they deliver maximum force – for greater efficiency with every single stroke. The grips are either made of the finest, untreated core leather or from two-component plastic material. Uncompromising tools that delight at first glance and continue to impress users every time they are picked up – and are also admired by those who are merely able to look on.

MASTER RANGE RIP AND FRAMING HAMMERS: LENGTH WORKS

795
Rip Hammer

796
Framing Hammer

595
Rip Hammer

596
Framing Hammer

01_Head

Forged with alloyed, hardened, special steel and given a smooth finish.

02_Claw

A straight rip claw on both sides for greater stability when prying and pulling nails Nail holder with an extremely strong magnet

03_Face

Carefully hardened and specially tempered round face. Available with checked or plain face. Checked version with particularly deep checks.

04_Shaft

Two lengths available. Forged and weight-optimised shaft for perfect balance and maximum impact. The shaft turns smoothly into the grip. Great impact momentum and ease at reaching tough spots. Ideal for long or thick nails and for prying nailed wood apart.

05_Leather handle

The leather grip on the solid steel handle is resistant to twisting. It not only looks good, leather absorbs moisture and releases it again once the work is done. The surface is extremely wear-resistant. The two-component plastic handle (no image available) is ergonomically optimised and designed to be vibration-damping. It makes work effortless and is extremely durable thanks to the solid joint between the shaft and handle, and the robust base plate.

06_Grip cap

Protects from slipping

PICARD MASTER RANGE RIP- AND FRAMING HAMMERS

Working efficiently means being able to hit hard to reach spots with a hammer. Therefore the old rule applies: Length works. The rip and framing hammers from PICARD originated where wood frame construction has a long tradition: in America. The long shaft gives these hammers considerably greater impact momentum. This pays off especially when working with long or thick nails. It's also useful in demolition work, for when the going gets tough, a hammer often has to do the job of a crowbar. The extra-long shafts of the rip hammers give even greater leverage force when prying nailed wood apart. PICARD also equips the rip and framing hammers with a claw on both sides and manufactures them as solid steel tools with a real leather or two-component handle. For maximum durability and application safety.

MASTER HAMMERS: ROBUST CLASSICS

698
Carpenters' Roofing Hammer

298
Carpenters' Roofing Hammer

298e
Carpenters' Roofing Hammer
Chrome or gold plated finish

292
Claw Hammer
American Pattern, 25 or 27 mm
face diameter, 16 or 20 oz.

01_Head

Forged using alloyed, hardened, special steel and given a smooth finish. The extended tubular shaft holding fixture provides additional protection when striking and is more stable when levering. The nail holder on the carpenters' roofing hammer has an extremely strong magnet. Optionally available with an additional locking pin, and a two-component handle.

02_Claw and point

The claw and the slim, extended point on the carpenters' roofing hammer are precisely wrought and inductively hardened. Even small nails are securely caught.

03_Protective ring

Mounted securely on the shaft, the hardened steel protective ring provides extra safety should the hammer not hit its target precisely.

04_Face

The face is carefully hardened and specially tempered; the roughened version has particularly deep checks. Also available with a plain face

05_Shaft

Extremely resilient shaft made from chrome molybdenum tube. Especially tough and elastic. Additional hardening ensures particular toughness.

06_Handle

The traditional handwork handle. The handle and shaft are solidly bonded using a specially developed two-component industrial adhesive. A special construction ensures that the end of the shaft doesn't work its way through the handle. The vibration-damping material and ergonomic shape make work effortless. Also available with a black and brown two-component handle (no image available).

PICARD MASTER HAMMERS

The master hammers have everything it takes to be genuine classics. The best materials skilfully combined and joined to be bombproof: that's how a tool should be. Here, the latest technology meets classic handwork. A carefully shaped forged hammer head sits unshakably on a seamlessly wrought special steel tube. The handle, constructed by us from vibration-damping and non-slip plastic, ensures that these tools will remain securely in your hand, so that every time it is used, it will show what handwork really is.

BLACKGIANT: WHEN PARAMOUNT SAFETY COUNTS

820M
Carpenters' Roofing Hammer

891
Claw Hammer
American Pattern, face diameter 25
or 27 mm, 16 or 20 oz.

897
Tilers' Hatchet

875

01_Head

Forged using alloyed, hardened, special steel and given a smooth finish. The nail holder on the carpenters' roofing hammer has an extremely strong magnet.

02_Claw and point

The claw and the slim, extended point on the carpenters' roofing hammer are precisely wrought and inductively hardened. Even small nails are securely caught.

03_Protective ring

Mounted securely on the shaft, the hardened steel protective ring provides extra safety should the hammer not hit its target precisely.

04_Face

The face is carefully hardened and specially tempered; the roughened version has particularly deep checks. Also available with a plain face.

05_Inner pipe

The additional hardened inner pipe extends right up to the head. It protects the shaft from deformation even under extreme stress – for greater safety in critical work areas.

06_Shaft

Perfect safety provided by the additional inner pipe and interlocking join between head and shaft.

07_Handle

The vibration-damping two-component material and the ergonomic shape make work effortless. The handle and shaft are solidly bonded using a specially developed two-component industrial adhesive. A special construction ensures that the end of the shaft doesn't work its way through the handle.

**PICARD BLACKGIANT**

PICARD tubular shaft tools. It can't get any better? We were not satisfied with that, and as a result we came up with the BlackGiant series. In work situations where even greater safety is called for – on the roof or on scaffolding – is where it is at home. The cleanest finish on the head ensures that it can always be used safely, particularly in the most difficult situations. And when the going gets tough, the additional inner pipe provides a level of breaking resistance that exceeds all norms. The BlackGiant scores further points with its patented join between head and shaft, and the special orange handle, which guarantees the best grip, good damping and effortless work – every time it is picked up and struck, hour after hour, year after year.

STANDARD SERIES: BETTER THAN THE REST

600S, 620M
Carpenters' Roofing Hammer
620M with, 620S without magnetic
nail holder

291
Claw Hammer
American pattern, 13 or 16 oz.,
face diameter 27 mm

297, 297½ (discontinued article)
Tilers' Hatchet
500 or 600 g

275
Masons' Hammer
Rhineland pattern

277, 277½
Masons' Hammer
Berlin pattern, 500 or 600 g

361, 361½
Geologists' Hammer
With point or blade,
300 or 500 g

301
Fitters' Hammer
300 or 500 g

304
Mining Sledge
1000 or 1250 g

01_Head

The hammer head is forged using alloyed, hardened special steel and painted black. The claw hammer is also available with a polished head. The nail holder has an extremely strong magnet.

02_Claw and point

The claw and the slim, extended point on the carpenters' roofing hammer are precisely wrought and inductively hardened. Even small nails are securely caught.

03_Face

Carefully hardened and specially tempered. The right bevel ensures a long lifespan.

04_Locking pin

When it comes to your safety, nothing is too expensive for us: instead of the usual, cheaper dowel pin, even on our standard series we use a hardened locking pin, which permanently joins the head to the shaft.

05_Protective ring

Mounted securely on the shaft, the hardened steel protective ring provides extra safety should the hammer not hit its target precisely.

06_Shaft

Seamlessly produced from C45 steel pipe and subsequently hardened and tempered.

07_Handle

Standard handles and shafts are solidly bonded using a specially developed two-component industrial adhesive. Here, too, a special construction ensures that the end of the shaft doesn't work its way through the handle.

**PICARD STANDARD SERIES**

Even PICARD tools in the standard series achieve a lifespan that others can only dream of. And for the users, the quality of the tool in everyday use is tangible and visible. Where many manufacturers stop, we begin. Thanks to an ergonomic and solid grip, daily work becomes a safe experience. The standard series has optimally formed hammer heads for every field of application, which are permanently joined to the shaft. Every time they are picked up, they demonstrate what is meant by PICARD quality.

PROBLEM SOLVERS: INVENTIVE SPIRIT MEETS TRADITION

304½

Chisel

Ideal for the simple chiselling of slots or chipping away plaster – even in hard-to-reach places. There is no longer any need for cumbersome tool changes. Use it once and you won't want to part with it.

350

Special Hammer for water-works

Efficient tool for the water industry

650

Carpenters' Roofing Hammer

The patented, ground and hardened edges are perfect for scraping off concrete debris.

276

Toothed Tilers' Hammer

The toothed edge causes less vibration on impact. It reduces the risk of slipping off and power is transferred effectively, because the teeth penetrate the material better on the first strike. The outcome is more precise results and effortless working that is gentle on the joints.

296

Toothed Tilers' Hatchet

01_Head

Forged using alloyed, hardened, special steel and given a smooth finish. The extended tubular shaft holding fixture provides additional protection when striking and is more stable when levering. The nail holder on the carpenters' roofing hammer has an extremely strong magnet.

02_Edges

Two sharp and tempered edges specially shaped for scarping away concrete residue.

03_Claw and point

The claw and the slim, extended point on the carpenters' roofing hammer are precisely wrought and inductively hardened. Even small nails are securely caught.

04_Protective ring

Mounted securely on the shaft, the hardened steel protective ring provides extra safety should the hammer not hit its target precisely.

05_Face

The face is carefully hardened and specially tempered.

06_Shaft

The face is carefully hardened and specially tempered. Especially tough and elastic. Additional hardening ensures particular toughness.

07_Handle

The handle and shaft are solidly bonded using a specially developed two-component industrial adhesive. A special construction ensures that the end of the shaft doesn't work its way through the handle. The vibration-damping material and ergonomic shape make work effortless.

PICARD PROBLEM SOLVERS

Among the problem solvers, problematic work processes have been analysed and constructively turned into new head shapes. The result is special tools that are capable of things that even experienced specialists barely thought were possible: no more slipping off from smooth surfaces, optimal traction even in difficult conditions – and all this without time-consuming tool changes. Only those who understand what handwork is all about can design such tools.

gift box

01

The steel carpenters' roofing hammers of the master range have a grip made of genuine core leather and are available with plain and roughened face.

02

The tiler's hatchet of the Master Range Series is also ideal as a camping and hobby axe.

03

The tubular shaft carpenters' roofing hammers are available with chrome-plated or gilded finish and roughened face.

04

The gift version of the 300 gram engine-fitters' hammer is marked by its waxed and polished shaft made of hickory wood.

05

Another popular present is the small, 120 mm wide watchmakers' anvil with two horns.
